Corrugated Cartons

Corrugated cartons are a cost-effective and environmentally friendly method of packaging. We manufacture corrugated cartons to our customers' varied specifications, with over 30 years' experience.

We provide all grades from non-test single wall to heavy-duty triple wall. Additional available options include:

- Glued, taped, or stitched joints
- Kraft brown, mottled white, bleached white or custom coated color
- Two-color printing

Our state-of-the-art high-speed flexo-folder-gluer machines can sequentially score, slot, print, and glue with the highest quality and the greatest economy.

Low Volume Orders

These systems can produce boxes in a great range of quantities, configurations, and sizes - from the smallest to the largest. We can also reproduce the most difficult graphic requirements and even add hand holes needed for heavy products.

Why buy 1,000 boxes when you only need 100? Our semi-automatic taper/ gluer can produce small orders easily. Cut your inventories by buying just what you need. At Genesee Packaging, no order is too large or too small. Contact us about ordering or shop our online store.

Custom Signage

At Genesee Packaging, we also have the tools and experience to build custom signage for your business.

We construct the custom signage using plastic corrugate sheets which can withstand normal

indoor and outdoor conditions.

Signs can be built for one-side or two-sided viewing and are available in a variety of colors and sizes to fit your needs.

Contact us for all the details and let Genesee Packaging be your source for custom signage.

Dividers and Inserts

Genesee Packaging is fully equipped to provide specialized inserts and dividers to protect small, delicate, or painted items.

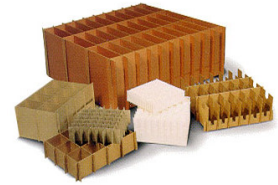

What do you require for your returnable packaging? We can produce corrugated plastic cell dividers from 2mm to 5mm, in a wide variety of colors.

Polyethylene foam can be die-cut to separate and

support fragile parts, or provide an excellent cushion in a convoluted or flat pad form.

Genesee Packaging manufactures a wide variety of partition assemblies and dividers. To protect painted parts, corrugated plastic or polycoated chipboard is recommended. If your parts will not fit into a typical round or square cell, a custom Genesee die-cut divider may be the solution.

Electronic or calibrated parts may require die-cut trays or inserts to secure them from movement. We can hold the closest of tolerances with our flat-bed die cutting equipment. This is the best packaging option for a fragile product requiring a precise fit.

Pallet Pack Systems

Genesee Packaging can simplify your packaging systems. Our specially designed Pallet Packs are all set up and ready to go. Just remove the cover, insert your materials into the interior divider and you're on your way. This eliminates the time-consuming steps of taping and gluing and is also very cost effective. Let our engineers design your packaging so you can focus on your own primary processes.

We can deliver these systems to your facility "just-in-time" and save precious floor space.

Do you need heavy-duty shipping containers? Genesee Packaging manufactures a wide variety of pallet boxes. These boxes can be shipped to your facility already set up or knocked flat. Let us support your just-in-time requirements or be your backbone to those hard to locate returnables. For your convenience, interior dividers are available, along with

corner posts and covers. Genesee Packaging pallets are designed and built to your specifications and can be made from hardwood, softwood, and heat-treated wood. Available pallet styles include 2-way entry, 4-way entry, 9-block, flush and winged. We will help you determine the most effective pallet at the best possible price.
